# Survey Method

In May 2016, the South Dakota Criminal Statistical Analysis Center (SAC) surveyed police departments in the State. A survey accompanied by instructions was emailed to all police departments. The completed surveys were encoded and verified by the South Dakota Criminal Statistical Analysis Center staff.

This was the 16th time the SAC compiled statewide management data pertaining to South Dakota police departments. The results of this survey are intended to provide police chiefs with a valid means of comparing expenditures and resources of departments across the State. In addition, the results should provide the Chiefs with a substantial basis from which to justify future managerial decisions.

Currently, there are 73 police departments in South Dakota (this figure does not include tribal agencies). Forty-three departments returned surveys yielding a total response rate of 59%. This is the lowest response rate since the inception. Of the 73 respondents, none designated themselves as a part-time department.

The survey instrument is a self-report completed by the Chief of Police or department staff. All questions were designed to be objective; however, some questions may have been subject to different interpretations. Thus, this report can only reflect summary results that are as valid and accurate as the data provided by each department.

It should also be noted that salary data throughout this report are approximations. Due to the number of personnel at any given rank and the diverse salaries relative to each officer, such approximations were necessary in order to perform overall summary calculations.

The population figures included in this publication were obtained from the Federal Bureau of Investigation. The FBI UCR Program obtained city/town and county decennial population counts for year 2010 and the July 1st 2010, 2011, 2012, 2013 and 2014 population estimates from the U.S. Census Bureau. The UCR staff computed individual rates of growth from one year to the next for every city/town and county. Each agency's rates of growth were averaged; that average was then applied and added to its 2014 Census population figure to derive the 2015 population estimates. The resident county population sum of 858,469 was used. The information included in this report was generated by a combination of these population figures and data collected through the National Incident-Based Reporting System from the participating agencies. Three agencies have not participated in NIBRS reporting therefore their population numbers were obtained from the 2010 census. Those agencies are: Mission PD, Platte PD, and Webster PD. SDSU PD and USD PD population numbers represent their 2015 Fall enrollment. The total population of the cities whose full-time police departments responded to the survey is 470,779.

# Population, Budget, & Insurance Benefits

This table shows the departments in alphabetical order, their population, total budget, percent of budget derived from grant money, if the department pays for the employee's insurance and does the department pay for any of the family's insurance.

Department	Population	Total Budget	Grant %	Insurance Employee	Insurance Family
